PROFESSIONAL SUMMARY

Data Scientist with 4 years of experience across healthcare, banking, and retail analytics. Skilled in data analysis, workflow automation, and building scalable analytics solutions to generate actionable business insights. Experienced in translating complex data into strategic recommendations that drive measurable outcomes. Proven track record in designing A/B experiments, developing scalable BI and machine learning solutions, and delivering data-driven insights to support executive decision-making and cross-functional business impact.

WORK EXPERIENCE

Mu-Sigma Business Solutions Pvt Ltd., *Decision Scientist* 03/2022 – 03/2026 | Bangalore, India
Lead a cross-functional team of analysts while collaborating with product managers and stakeholders to translate business problems into scalable data science solutions.

CORE COMPETENCIES

Programming & Query Languages: Python, SQL
Data Science & Analytics: Machine Learning, Scikit-learn, TensorFlow, NLP, Feature Engineering, Deep Learning, A/B Testing, Time Series Forecasting, Data Governance
Platforms & Tools: Azure Databricks, AWS, Domino, Power Automate, Tableau, Microsoft Purview, Figma
Professional Skills: Problem Solving, Cross-Functional Collaboration, Business Storytelling, Project Leadership

PROJECTS

- Pharmaceutical Medical Activity Monitoring & Automation Platform**
- Developed a global medical launch monitoring platform powered by AI for a Fortune 500 pharmaceutical client, facilitating real-time tracking across various therapeutic indications
 - Streamlined workflows through the use of Domino Scheduler and Python, resulting in a 40% increase in operational efficiency and a 60% reduction in manual effort
 - Incorporated predictive models to anticipate activity delays and resource utilization, thereby improving launch success rates by 20%
 - Linked data pipelines to SharePoint using Power Automate, enhancing data accessibility and synchronization by 50%
 - Created an interactive Tableau dashboard that incorporates outputs from machine learning models to track all product activities and statuses across various regions and countries, facilitating real-time, data-informed decision-making
- Data Governance & Quality Initiative with Microsoft Purview**
- Implemented an enterprise data governance framework using Microsoft Purview to ensure data integrity and standardized data management across banking and logistics domains
 - Built automated data quality monitoring pipelines in Azure Databricks to detect anomalies and improve data validation processes, enhancing data accuracy by 35% and reducing validation time by 50%
 - Standardized metadata management and data lineage tracking across five business units to improve data transparency and governance
 - Collaborated with compliance teams to ensure alignment with GDPR and Basel III regulations, reducing regulatory risk and improving enterprise data governance practices
- Clinical Trial - Patient Cohort Creation & Site Recommendation**
- Supported clinical trial planning and site selection by analyzing real-world healthcare datasets across multiple therapeutic areas
 - Worked with TA leads, drug leads, and principal investigators to identify optimal patient cohorts and site requirements for five clinical trials
 - Utilized platforms including Veeva Compass, Veeva Link, Veeva CTMS, Komodo Prism, and Aperture to analyze patient demographics, treatment patterns, and site capabilities
 - Delivered data-driven site recommendations, reducing site failure risk and generating approximately \$5M in cost savings
- Retail Campaign Performance Analytics & Lift Measurement**
- Collaborated with product management teams of a multinational retail organization to design analytics frameworks for measuring campaign effectiveness using lift metrics
 - Developed automated reporting pipelines to evaluate campaign performance and customer engagement metrics
 - Improved report generation efficiency by 50% while enhancing data accuracy for campaign performance analysis
- AI Knowledge Assistant for Enterprise Insights**
- Created an internal knowledge assistant powered by a large language model (LLM) utilizing the OpenAI API, LangChain, and Azure Cognitive Search to derive contextual insights from both structured and unstructured enterprise data
 - Refined a GPT-based model to accommodate domain-specific terminology, allowing teams to access insights related to compliance, sales, and medical launches in natural language
 - Achieved a 70% reduction in query response time and enhanced the efficiency of internal decision support across various business functions

CERTIFICATES & ACHIEVEMENTS

Python & SQL Programming SkillRack	Data Science & Machine Learning Coursera	Adobe UX Design NASSCOM FutureSkills	Azure Data Fundamentals Databricks
Data Science Practitioner Domino	3x Spot Award Mu Sigma Business Solutions	Top 5 Winner All India Essay Contest, DAE, India	

EDUCATION

B.E Electrical and Electronics Engineering, *Sri Sairam Engineering College* 06/2018 – 04/2022
• CGPA: 8.9
